SUMMARY

I am a general digital product design specialist with skills ranging from user analysis, UX research, building design systems from scratch, UI design, branding, and migration. Graphics animation and user interface development.

Although I have many years of experience in Graphic Design, I am quite immature in the field of UI/UX. So, I applied for an unpaid internship at GK Group for 3 months, after which I became a full-time employee. After that, because the personal orientation and personnel structure of the company changed, I moved to VNEXT Software and worked until now. I have participated in many outsourced projects here and had the opportunity to take advantage and learn more in other areas such as Front-end Programming, Video Editing, Audio Editing, and MC of an Internal Radio channel.

I then moved to Son Thanh Holdings, a product company operating in the logistics field, to learn more about the complete product development process. Here, I further strengthened my knowledge of UX Design and supplemented my experience in UI Design.

I am currently looking for my next adventure as a UI/UX designer. I thrive in environments like E-Learning, real estate, environment, virtual currency, community services, etc. However, the areas of opportunity are endless and the impact of design has The body is very large so I can completely participate in other fields.
